CONTINENTAL CLAY™ MID-RANGE MATTE GLAZE: DRY

Cone 5-6

Our soft-matte glazes offer an exciting new color and texture palette. Impressive as stand-alone colors or in combination with our gloss glazes. Dramatic effects are achieved by applying matte glaze, followed by a gloss or transparent glaze overcoat. Our new Satin Matte White (GC831) offers a brighter white surface with an exceptionally soft sheen. Most of our matte glazes can be fired as high as cone 9 in oxidation, yielding a beautiful array of unique surfaces with a gloss finish. Can also be fired to cone 10 reduction with a new range of color results.

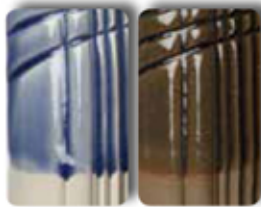

* Glazes marked with an asterisk can be fired to cone 10 reduction.

CONTINENTAL CLAY™ MID-RANGE TRANSPARENT GLAZE - DRY

Cone 5-6

Our popular Mid-Range glaze series is formulated on a transparent base. Results are strongly influenced by the underlying clay color. Brightest colors are achieved over light clay bodies. The high-sheen surfaces are complemented by pooling over ridges, add striking dimensions. Bisque between cone 08-06. Glaze fire to cone 6.
